

Justin Kim HW,

1a) $683 = 5(153) + 21$

$153 = 7(21) + 6$

$21 = 3(6) + 3$

$6 = 2(3)$

$\boxed{GCD = 3}$

b) $52 = 3(15) + 7 \rightarrow 7 = 52 - 3(15)$

$15 = 2(7) + 1$

$7 = 7(1)$

$GCD = 1$

$1 = 15 - 2(7)$

$3 = 3(15) - 6(7)$

$3 = 3(15) - 6(52 - 3(15))$

$3 = 3(15) - 6(52) + 18(15)$

$3 = -6(52) + 21(15)$

$\boxed{a = -6}$
 $\boxed{b = 21}$

2a)

$5a + 23 = 6 \pmod{499}$

$5a = -17 \pmod{499}$

$5a = 482 \pmod{499}$

$a = 5^{-1}(482) \pmod{499}$

$a = 5^{-1}$

$\gcd(499, 5) = 1$

$\gcd(5, 4) = 1$

$499 = 99(5) + 4$

$5 = (1)(4) + 1$

$4 = (4)(1)$

↓
gcd

$\gcd(4, 1) = 1$

$$5x + 499y = 1$$

↓

$$1 = 5 - (1)(4) \quad 4 = 499 - 99(5)$$

$$1 = 5 - (499) - 99(5)$$

$$1 = 5 - 499 + 99(5)$$

$$1 = (100)(5) - 499$$

$$x = 100$$

$$y = -1$$

$$x = 100 \bmod 499$$

$$a = 100 \bmod 499 \quad x = 482 \bmod 499$$

$$a = 48200 \bmod 499$$

$$a = 296 \bmod 499$$

$$b) \quad 9a = -78 \bmod 81$$

$$9a = 3 \bmod 81$$

$$a = 9^{-1}(3 \bmod 81)$$

$$x = 9^{-1}$$

No solution

$$\gcd(81, 9)$$

$$\gcd(81, 9) = 9 \neq 1$$

$$\begin{aligned}
 C. \quad b - 3a &= 4 \pmod{37} \quad \text{--- } d5 + 0 \text{ for } d5 \\

$$\begin{aligned}
 1 &= 5 - 2(2) \quad \text{--- } 1 = -15(69) + 28(37) \\
 1 &= 5 - 2(32 - 6(5)) \quad a = -15(28) \pmod{77} \\
 1 &= 5 - 2(32) + 12(5) \quad -32 \pmod{37} \\
 1 &= -2(69 - 37) + 13(37 - 32) \\
 1 &= -2(69) + 2(37) + 13(37) + 13(32) \\
 1 &= -2(69) + 15(37) + 13(69 - 37) \\
 1 &= \cancel{-2(69) + 15(37) + 13(69 - 37)} \quad \text{--- } 1 = 11(69) - 2(37)
 \end{aligned}$$

$$960 \bmod 37 + 3b \equiv 0 \bmod 37 \quad \dots$$

$$3b \equiv -960 \bmod 37$$

$$3b \equiv 2 \bmod 37$$

$$b \equiv 3'(2) \bmod 37$$

$$\gcd(37, 3) = 1$$

$$\gcd(3, 1) = 1$$

$$1 = (0 \cdot 3) + (-1) \cdot 3 \bmod 37$$

$$37 = 12(3) + 1$$

$$1 = 37 - 12(3)$$

$$1 = 37 - 12(3)$$

$$12(2) \bmod 37 = 24 \bmod 37 = 24$$

$$(58)(11) - 12 = 2 \Rightarrow 13 \bmod 37 = 13$$

$$(2)2 - 58 = 8 \quad 5 + (2)2 = 58$$

$$a = 32 \bmod 37$$

$$b = 13 \bmod 37$$

$$1 + (5)2 = 11$$

$$(1)2 = 2$$

$$(05)25 + (12)24 = 1$$

$$(5)2 - 2 = 1$$

$$(1)2 - 58 = 1$$

$$(2)2 + (58)2 = 1$$

$$(58 - 12)2 + (12)2 = 1$$

$$(58)2 + (12)2 + (12)2 + (12)2 = 1$$

$$(58 - 12)2 + (12)2 + (12)2 = 1$$

3a) - $\gcd(a, b) = \gcd(b, a)$ b.c. of commutative property of GCD

$$- \gcd(b, a) = \gcd(a, b \bmod a)$$

$\gcd(a, b')$ due to substitution

- Thus if it is given that $\gcd(a, b) = 1$

b/c they are relatively prime,

$\gcd(a, b') = \gcd(a, b) = 1$ so a, b' must be relatively prime

b) - If a/c there exists some $d \in \mathbb{Z}^+$ such that $ad = c$

- If b/c there exists some $f \in \mathbb{Z}$ such that $bf = c$

- If $\gcd(a, b) = 1$, $ax + by = 1$ for some $x, y \in \mathbb{Z}$

$$- d(ax + by) = d(1)$$

$$ax + by = d \quad \Rightarrow \quad adx + bdy = d(1) = d$$

$$c = b \cdot f$$

$$cx + bdy = d$$

$$bfx + bdy = d$$

$$b(fx + dy) = d$$

$$c = ad = ab(fx + dy)$$

$$\therefore ab \mid c$$

$$4a) (a \oplus b) \oplus (b \oplus a) = (a-b) \oplus (b-a) \pmod n$$

$$= (a-b) + (b-a) \pmod n$$

$$= 0 \pmod n = 0$$

Thus $(a \oplus b) \oplus (b \oplus a) = 0$

b) Assume $a \otimes b = 0 \rightarrow b \neq 0 \wedge a \neq 0$

because negating $p \rightarrow q$ statement requires negating q . (proof by contradiction).

- If $b \neq 0 \wedge a \neq 0$, then $a \otimes b \neq 0$.

- This contradicts our true assumption

that $a \otimes b = 0$.

$\therefore a \otimes b = 0 \rightarrow a = 0 \vee b = 0$

5a) Counterexample: $a \oplus b$

~~$2 \oplus (n-2) = 0$ is not invertible~~

$2 \oplus (n-2) = (2+n-2) \pmod n$ not invertible

$$= n \pmod n = 0$$

Counterexample: $a \oplus b$

$1 \oplus 1 = (1-1) \pmod n = 0 \pmod n$

Not invertible.

b) $a \otimes b$ is invertible

~~$a \otimes b$~~ $a \otimes b = (a \otimes b) \pmod n$

$(a \otimes b) \otimes (b^{-1} \otimes a^{-1})$

$$\downarrow$$

~~$a \otimes b$~~ $(a \otimes b \times b^{-1} \otimes a^{-1}) \pmod n = 0$

$$= 1 \pmod n = 1$$

c). $a \otimes b$ is invertible

- ~~$a \otimes b$~~

- $a \otimes b = a \otimes b^{-1}$

- $(a \otimes b^{-1})^{-1} = (b \otimes a^{-1})$

- $(a \otimes b^{-1}) \otimes (b \otimes a^{-1}) =$

$$(a \times b^{-1} \times b \times a^{-1}) \bmod n = 1 \bmod n$$

$$= 1$$

$\therefore a \otimes b$ is invertible.
